

Step 7 - Failure Diagnosis and Bounded Repair Proposal

Output: evidence packets, diagnoses and bounded repair proposals

Turn localized residual conflicts into auditable diagnoses and allow-listed proposals without changing world state

$\mathcal{E}_i$ synchronized evidence packet · Δ_i operator, variables, window, bounds, expected effects and compute budget

Every proposal cites its parent hypothesis, source conflicts, residual IDs and evidence lineage.

Step 8 may instantiate a proposal locally; Step 9 decides feasibility and retention.
